

Health Data Summary

From the data gathered between April 16, 2025, and July 11, 2025, several key observations can be made regarding the patient's health and care.

1. **Heart Rate:** The average heart rate for the patient during this period was around 41.5 beats per minute. The minimum heart rate recorded was 38 beats per minute, and the maximum was 124 beats per minute.
2. **Breathing Rate:** The patient's breathing rate was steady at approximately 13.6 breaths per minute.
3. **Sleep:** The patient tends to have light sleep most of the time (5.6 hours), followed by deep sleep (1.9 hours), REM sleep (1.6 hours), and very little awake time during sleep (0.7 hours). The total sleep duration was about 9.2 hours.
4. **Medication and Meals:** The patient was on a medication named 'Med2 - 15mg'. The patient's meals mainly included water (with or without Cranbury juice), and a dinner of turkey sandwich with potato chips.
5. **Observations and Actions:** The caregivers noticed some moisture and discharge around the patient's g-tube area. As a result, the g-tube button was replaced. Additionally, there were instances when some discharge from the g-tube was visible on the patient's T-shirt upon waking from sleep. On a positive note, the patient had a great day and cooperated throughout
